

## Office 365 is now available in New Zealand

As a small business professional, you don't want to be bogged down with technology issues even for a second. When it comes to working with the best technology tools, you can tap into cloud productivity services and work with ease from almost anywhere on virtually any device, without the need to manage servers with Office 365.

Office 365 is the next version of the BPOS (Business Productivity Online Suite) collaboration and communication suite. Among the main improvements in Office 365 is that its applications, including Exchange Online and SharePoint Online, are based on the 2010 version of their on-premise counterparts, while BPOS' are based on the 2007 version. Office 365 also comes with Lync Online, which is an upgrade to Office Communications Online.

Also significant is that Office 365 offers customers the option to have Office productivity applications like Word and Excel either through Office Web Apps -- the online version of Office -- or through the full-fledged, on-premise Office Professional Plus 2010 delivered via a subscription model.

Office 365 comes in a variety of configuration options and price points. A tailored version for SMEs will cost \$9.25 per user per month. Enterprise plans start at \$15.24 per user per month and scale to \$43 per user per month for the full suite of services.

Office 365 is designed for businesses of all sizes. More than 70 percent of the about 200,000 companies that beta-tested Office 365 were small and medium-size businesses.

Officials demonstrated Office 365 capabilities, like the ability for multiple users to jointly collaborate and edit documents in real time, not only from PC browsers but also from mobile devices.

**The familiar tools you want to keep.**  
**The cloud experience you've been waiting for.**

We are excited to bring the industry's leading productivity solution to the cloud, and we're proud of its built-in reliability and security safeguards:

- Microsoft Exchange Online messaging, run on our geo-redundant servers and protected by built-in multilayer antivirus and antispam filters.
- Next-generation communication capabilities with Microsoft Lync Online - including presence, instant messaging, audio and video calling, and rich online meetings\* - with just a click on the interactive presence icons within Microsoft Outlook, Microsoft SharePoint, and Microsoft Office apps.
- Consistent access to documents, contacts, calendars, and email from virtually anywhere, on virtually any device.
- SharePoint Online, which helps businesses create sites to share documents and insights with colleagues, partners, and customers.

- Our financially backed, 99.9 percent uptime service level agreement.
